Weiqi Feng 1040 N. Pleasant St., Apt 81 - Amherst, MA - 01002

☐ (413)-409-1314 • ☑ weiqifeng@umass.edu • ☐ weiqi97 • in weiqifeng97

Education

UMass Amherst, M.S./Ph.D., Amherst, MA

Sep 2019–Anticipated Sep 2025

Major in Computer Science

Coursework: Machine Learning, Neural Networks, Applied Cryptography, Advanced Cryptography, Secure Distributed Systems, Advanced Information Assurance

Wheaton College, Bachelor of Arts, Graduated with departmental honors, Norton, MA

Aug 2015-May 2019

Double Major in Mathematics and Computer Science, Minor in Statistics

Honors: Phi Beta Kappa, Balfour Scholarship, Mars Faculty-Student Research Grants, May fellow

Awards: Madeleine F. Clark Wallace Mathematics Prize, Fred Kollett Prize in Mathematics & Computer Science

Programming Skills

o Languages: Python, C/C++, Java, Go, Haskell, R, JavaScript, Swift

o Frameworks and Tools: Pandas, Numpy, PyTorch, Flask, Node.js, Angular

Projects

o Machine learning on encrypted data with Functional Encryption

Sep 2020 — Dec 2020

This project enables machine learning models to train on encrypted data so that models only learn the intended computational results.

o Implementation of inner-product Function-revealing encryption

Sep 2020 — Nov 2020

This implementation achieves an inner-product construction of the function-revealing encryption scheme, allowing any third party with access to ciphertexts to compute inner-products on them.

o Lexos: a software project supported by the National Endowment for the Humanities (NEH) ♥ Jan 2017 — Jun 2019 Lexos provides scholars of literature with a web-based workflow for text processing, statistical analysis, and visualization of results when exploring digitized texts.

Honors Thesis in Abstract Algebra and Cryptography O

Sep 2018 — May 2019

Developed a text shuffling encryption schema and a key exchange protocol inspired by group theories in Rubik's Cubes.

Leadership & Experience

UMass Cybersecurity Institute, Graduate Research Assistant, Amherst, MA

Sep 2019 — Aug 2020

- o Designed inner-product construction for function-revealing encryption that is secure against selective IND-adversary
- o Conducted literature review on state-of-the-art topics on functional encryption such as multi-input functional encryption, decentralized encryption and indistinguishability obfuscation
- o Presented related work to a team of advisor, postdoc and another PhD student and explored methods to incorporate existing techniques

Lexomics Research Group, Software Team Leader, Wheaton College, Norton, MA

May 2018 — June 2019

- o Trained 15 software developers in Linux, Git, CI, and code coverage tools to familiarize them with the development environment
- o Maintained a high standard of Python and JavaScript code quality within the team by establishing good practice through peer reviews
- o Prepared manuals and documentation on the installation, operation, and maintenance of the Lexos software
- o Designed interactive visualizations using Plotly to simplify clustering analysis results to improve ease of comprehension

Wheaton College Computer Science Department, System Administrator, Norton, MA

Sep 2017 — May 2019

- o Maintained Ubuntu server that hosts the computer science department's homepage and performed weekly backups of user data
- o Installed and configured software, hardware, and networks for 20 workstations in the computer science lab
- o Evaluated systems' performance and troubleshot problems reported by users

Lexomics Research Group, Software Developer, Wheaton College, Norton, MA

Jan 2017 — Dec 2017

- o Worked with a team of eight programmers and four English scholars to improve and extend the Lexos software
- Refactored Python codebase under the model-view-controller architectural pattern to provide an environment for stateless functions
- o Designed unit tests under established standards to improve the reliability of the codebase
